Control Cinguoni Cio Cio Cio Cio Cio Cio Cio Cio Cio Ci	Date of report:	19/06/2024	

### **Testing Requirements**

Testing of a rail mounted davit arm described as "ERD.3500.0500" in accordance with BS 8610:2017 type D2, D3 & D5 for up to 2 users

This report replaced the previous issue, dated the 26th March 2024

For SATRA's full terms and conditions see our website: https://www.satra.com/terms\_of\_business.php

For SATRA's statements regarding the confidentiality, publication and dissemination of this report, decision rules and UKAS accreditation please see the final page of this technical report.

### **WORK REQUESTED**

Samples of an anchor rail described as "ERD.3500.0500" were made available to SATRA on the 6th March 2024, for testing in accordance with BS 8610:2017 types D2 Fall arrest – Non-load-limiting, D3 Rope access and worm positioning – Non-load-limiting & D5 Rescue – remotely or self-operated – direct attachment – Non-load-limiting

### **TESTING**

Testing was carried out in accordance with BS 8610:2017 between the 6th March & 14th June 2024 and was witnessed by representatives from Sayfa Group Sayra Group (Euro

The anchor device is intended as a type D device

The anchor device allows up to a maximum of 2 users to be attached simultaneously

For the purposes of testing, the anchor device was installed onto concrete using M10 concrete screws, with test forces applied in a vertical direction

Samples were tested as received, and were not subject to any pre-conditioning processes other than those stated in individual test clauses

### **ADDITIONAL INFORMATION / NOTES**

	Ltd	W6Mo	Spo	
	ADDITIONAL IN	FORMATION / NOTES	1046>10 ayfa Gr	
	Table 2 – Additional ui	ncertainty of measurement information (see note	(E) (E) (E) (E)	4/0
	CLAUSE 70	TEST / COMPONENT	UoM (see note 1)	7
	750	Temperature	± 0.99 °C	
Corrosion	Fall-out rate of collected solution	± 2.25 ml (± 0.04 ml/hour for 24 hours)		
	Specific gravity of collected solution	± 0.0010 g/ml		
	resistance	pH value of collected solution	± 0.1	
		Angle of sample mounting (if applicable)	± 1.44°	

Note 1 - 'UoM' denotes estimated Uncertainty of Measurement for stated test results. This uncertainty value is based on a standard uncertainty multiplied by a coverage factor k = 2, which provides for a confidence level of approximately 95%

Note 2 - Estimated uncertainty of measurement applied at point of test (e.g. to applied force or to tolerance limits) to ensure product meets requirements of the standard

Note 3 – Static strength testing carried out by manually increasing loading, therefore rate of stressing / crosshead velocity as per EN 364: 1992 Clauses 4.1.2.1 & 4.1.2.2 cannot be accurately determined (see VG11 recommendation for use sheet CNB/P/11.023 dated 25.10.2007)

Note 4 – 4.7 Corrosion resistance. Samples were placed in a horizontal orientation during testing

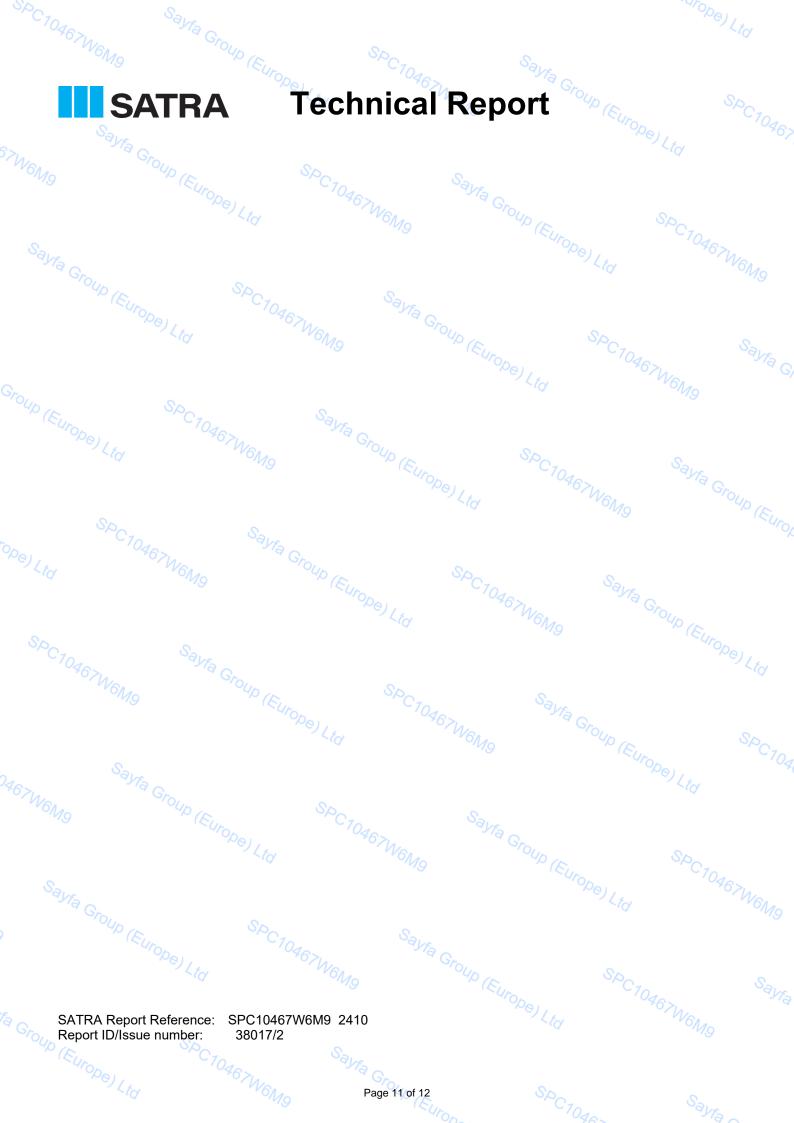

Note 5 - pH value of test solution was found to exceed the tolerances specified in ISO 9227: 2017. This was not considered to significantly influence results however

Note 6 – Testing carried out under job reference SPC2004907

### Conditions of Use

### **Confidentiality and Dissemination**

SATRA test reports may be forwarded to other parties if they are not changed in any way and are not marked as confidential. Test reports must not be published, for example by including it in advertisements, without the prior, written permission of SATRA.

### Liability

Results given in this report refer only to the samples submitted for analysis and tested by SATRA. Comments are for guidance only.

A satisfactory test report in no way implies that the product tested is approved by SATRA and no warranty is given as to the performance of the product tested. SATRA shall not be liable for any subsequent loss or damage incurred by the client as a result of information supplied in the report.

### Accreditation

Where the UKAS logo is included on the test report then tests marked ≠ fall outside the UKAS Accreditation Schedule for SATRA. Where no UKAS logo is included on the test report then none of the tests reported are covered by SATRA's UKAS Accreditation.

Tests marked ¥ are performed under SATRA's Flexible UKAS Schedule.

Opinions and interpretations fall outside the UKAS Accreditation for SATRA.

### **Uncertainty of Measurement and Decision Rules**

Where values for uncertainty of measurement are included within the report then the uncertainty of the corresponding results are based on a standard uncertainty multiplied by a coverage factor k=2, which provides a coverage probability of approximately 95%.

When reporting results against a conformance statement (Pass/Fail or the allocation of a class or level) then uncertainty of measurement is taken into account based on a non-binary acceptance which itself is based on the guard band being equal to the expanded uncertainty.

Where the result corrected for uncertainty falls within the tolerance of the conformance statement then the risk of the conformance statement being a false accept or false reject is up to 2.5% and SATRA will in this instance guote a Pass/Fail, class, or level.

Where the result corrected for uncertainty falls outside of the tolerance of the conformance statement then the risk of the conformance statement being a false accept or false reject is up to 50%. In this instance SATRA will not provide a Pass/Fail statement or a class or level but will include information in the notes in relation to the result obtained.

SATRA's guidelines provide recommendations that are based upon SATRA's knowledge and experience. The guidelines are intended to indicate conformance by providing information on the likely performance or characteristics of a property. As such, uncertainty of measurement is not applied when evaluating results against guideline recommendations.
